

Final Year Projects 2026/27

Prof. C K Chan, Calvin

Quota: 4

CKC1: Smart devices for IoT Applications

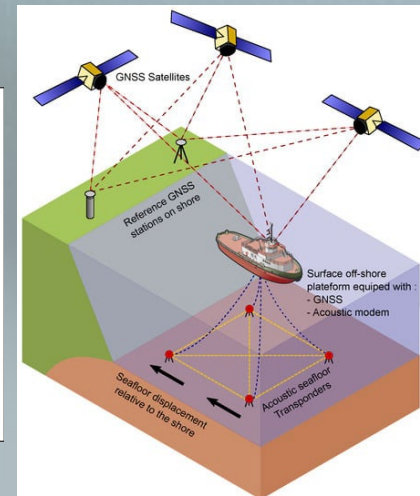

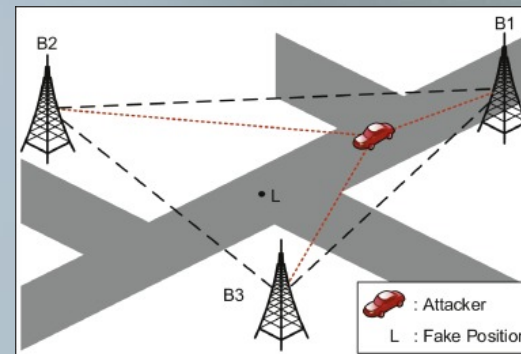

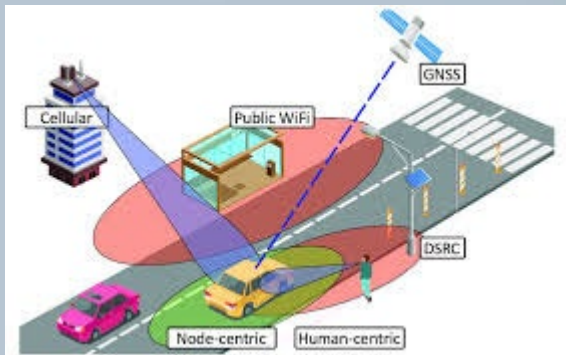

■ Number of Students: 1-2

- ☐ Use some **smart sensors/actuators** such as accelerometers, and other sensors, to build an interesting **smart device** to perform a specific IoT application
- ☐ You have to build a simple prototype to collect and analyze the raw data through a mobile app.
- ☐ This project involves hardware (sensors/embedded systems/mobile devices) and data collection & analysis, mobile app and user visualization.
- ☐ Examples, include eye blink monitors, body motion monitor for sports, smart wardrobe, smart shoes, etc.

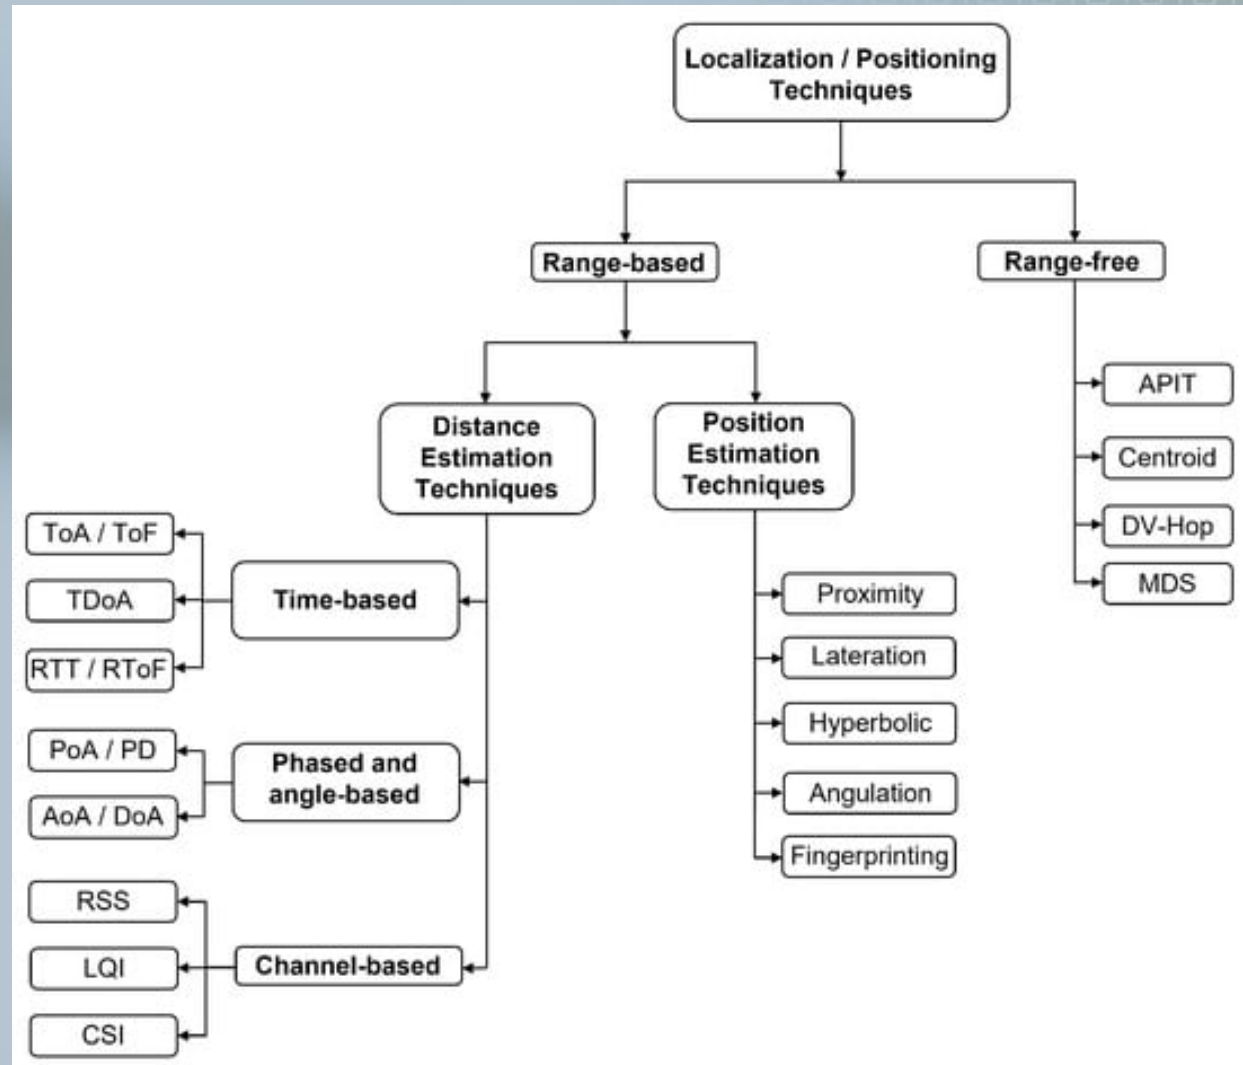

CKC2: Positioning of Flying or Moving Objects

- Number of Students: 1-2
- ❑ Design and develop a positioning scheme, based on communication technologies other than GPS, to find the locate coordinates of moving or flying objects
- ❑ Build a test bed for demonstration and characterization of the proposed positioning scheme
- ❑ Involve hardware assembly, software design, hardware control programming and prototype building.

CKC2: Positioning of Flying or Moving Objects

CKC3: Self-Proposed Project

- Number of students: 1-2
- You are welcome to propose an interesting application/development project that may be useful in everyday life.

FYP: Project Management

■ Overall Plan:

- Brainstorming of ideas
- Confirm the topic, and the features to be demonstrated
- Design and implementation plan, division of work
- Prototyping & testing
- Time management
- Presentation/demonstration plan

▣ You need:

- ❖ Self motivation & commitments
- ❖ Collaboration among group members
- ❖ Monitor time schedule
