Office: SHB 815

Project code :	CKC1
Project title :	Smart devices or systems for IoT Applications
No. of students :	1-2
Description of project :	The students will be asked to use some smart sensors/actuators such as accelerometers, and other sensors, to build an interesting smart device to perform a specific IoT application. You have to build a simple prototype to collect and analyze the raw data through a mobile app. This project involves hardware (sensors/embedded systems/mobile devices) and data collection & analysis, mobile app and user visualization. Examples, include eye blink monitors, body motion monitor for sports, etc.
Industrial collaboration :	No.

Project code :	CKC2
Project title :	Positioning of flying or moving objects
No. of students :	1-2
Description of project :	The students will be asked to study the positioning techniques to find the location coordinates of a moving or flying object using some communication technologies other than global positioning system (GPS). A testbed will be built to test the ideas. The project involves prototype building, software design, control and programming of hardware devices.
Industrial collaboration :	No.

Project code :	CKC3
Project title :	Self-Proposed Project
No. of students :	1-2
Description of project :	The students are asked to propose an interesting application/development project that may be useful in everyday life.
Industrial collaboration :	No.
