

Suggested FYP topics for 2026-27

by

Professor Wing Cheong LAU

Email: wclau@ie.cuhk.edu.hk

Office: SHB 818

Project code :	WCL1
Project title :	Measurement Study & Vulnerability Analysis of Open-source Agents (aka Clawbots)
No. of students :	1-2
Description of project :	Background Deployment of open-source Clawbots by non-technical novices have spread like wildfire. There is even a social network built for these agents ! - n https://www.reuters.com/business/openclaw-founder-steinberger-joins-openai-open-source-bot-becomes-foundation-2026-02-15/ - n https://www.facebook.com/photo.php?fbid=804986439289810 While it is well-known (at least in the Security community) that it is extremely dangerous to allow such open-source autonomous agents to access/ control one's privilege information and assets, many users have ignored the risk and start using these clawbots to drive/ manage their personal/ mission-critical communications and computing tasks. - n https://cybersecuritynews.com/clawdbot-chats-exposed/ - n https://www.aikido.dev/blog/why-trying-to-secure-openclaw-is-ridiculous - n https://www.i-cable.com/ 新聞資訊 / 中國在線 /445486/openclaw-龍蝦-潛藏風險-市場出現卸載-龍蝦-服務 Project Objectives - n To analyze the attack-surface and understand various vulnerabilities of Clawbots - n Quantify the prevalence of vulnerable (poorly-maintained) Clawbots deployed in the wild via a network measurement study - n Derive possible remedies/ counter-measures for the problem.
Industrial collaboration :	No.

Project code :	WCL2
Project title :	Design and Implementation of an Interesting Service/App using a consumer-grade, on-premise LLM
No. of students :	1-2
Description of project :	Background Affordable, On-premise LLMs running on various types of consumer-grade hardware have become a reality: - n https://www.nvidia.com/en-us/products/workstations/dgx-spark/ - n LLM on \$100 Orange Pi - n Web Stable Diffusion WebLLM that run LLM applications purely in a Browser LOCALLY - n MLC LLM (https://llm.mlc.ai, https://blog.mlc.ai) https://www.youtube.com/watch?v=InoNMvjs_vo Project Objective - n To develop an Interesting LLM-based Application/Service by leveraging a standalone, on-premise consumer-grade platform
Industrial collaboration :	No.

Project code :	WCL3
Project title :	Building an Interesting LLM Agent Application
No. of students :	1-2
Description of project :	Background As we enter a new phase of maturity and practicality of LLM Agent technologies, it's now much easier for one to convert interesting ideas to relatively low-code working prototypes and services. Refer to the following for some inspiring examples: - n Hackathon Winning entries from the UC Berkeley's MOOC on LLM Agents: - u https://rdi.berkeley.edu/llm-agents-hackathon/ , e.g. People Finders reuniting friends, Form-Filling-Agents, TerminAI, StoryLab, etc - n The Agentic applications mentioned by Andrew Ng in his recent AAAI 2025 keynote: https://underline.io/lecture/115522-ai-agents-and-applications - n Enterprise Workflow Applications leveraging emerging Agentic frameworks: - u https://medium.com/google-cloud/building-react-agents-from-scratch-a-hands-on-guide-using-gemini-ffe4621d90ae - u http://llmagents-learning.org/slides/agentworkflows.pdf - u https://www.youtube.com/live/-yf-e-9FvOc - u http://llmagents-learning.org/slides/autogen.pdf

	- u http://limgents-learning.org/slides/MKA.pdf - u https://www.youtube.com/live/OOdtmCMSOo4 Project Objective n Propose and develop an Interesting and Innovative LLM Agent Application
Industrial collaboration :	No.

Project code :	WCL4
Project title :	Self-proposed Topic
No. of students :	1-2
Description of project :	Need to seek approval of the self-proposed topic from Prof. Lau in advance.
Industrial collaboration :	No.

2026 March 12
